**TECHNICAL OUTLOOK ON THE INDIAN 10 YEAR GOI (Weekly Chart) 22/03/2024 (7.09%)**

The Indian 10-year benchmark yield recorded a peak of 7.62% in June 2022. Post the peak, the benchmark yield drifted downward to a low of 6.94% in May 2023. During the downward drift, benchmark yield moved below the key 20 week Wilders moving average in April 2023. The weekly MACD, too, moved into negative territory. However, when the weekly MACD, again, moved into positive territory, the 7.36% level (the 61.8% retracement level of the entire fall from 7.62% to 6.94%) had capped the rise in yields.

The benchmark yield is, now, placed below the 20 week Wilders moving average (current value is 7.17%). The weekly MACD is in negative territory. The 7.11% - 7.12% zone has not been breached in the past several weeks. Yields are currently placed at the 7.09% demand zone. If yields stay below 7.09%, in the coming weeks, the benchmark yield is likely to test the May 2023 low of 6.94%. However, if the selling decisively overcomes the 7.09% level, yields are likely to remain range bound for several weeks without going below 7.01%.

Brent Crude futures made a low of \$16 in April 2020. It then rallied to a high of \$137 in March 2022. Brent Crude futures have been in a corrective phase since then with a low of \$68 in May 2023 and a slightly higher low of \$72 in December 2023. Brent Crude prices are placed marginally above the immediate resistance of \$85. If it sustains above \$85, prices may move closer to \$94 in the coming weeks.

Last week, the USDINR futures moved well beyond Rs. 83 and made a new high for the USD at Rs. 83.73. This move has negated the potential weakness in the USD that we had been pointing out in recent weeks. For weakness in the USD / strength in the INR, a decisive move below Rs. 82.80 levels is required. The USDINR may again remain in a trading range above Rs. 83.

After registering a peak of 15.84% in October 1981, US 10-year yields remained in a lower-top, lower-bottom formation and made a low of 0.40% in March 2020. The up move from the March 2020 low of 0.40% appears to be part of a larger trend reversal. Thus, US 10-year yields may stabilise at elevated levels in the coming months / years.

As projected in our 23<sup>rd</sup> January 2024 report, the US 10-year yields have remained in a trading range for several weeks with 4.33% capping the rise in yields and downsides limited to 3.92% (the 61.8% retracement level of the rise in yields from the April 2023 low of 3.25% to the October 2023 high of 5.00%). A weekly close below 3.92% is required for yields to fall further whereas a weekly close above 4.33% can trigger a further rise to 4.54%.

From the May 2021 low of 89.54, the Dollar Index embarked on a rise that culminated in September 2022 at 114.78. The Dollar Index then had a sharp fall which resulted in a low of 99.58 in July 2023. The 61.8% Fibonacci retracement level of the rise from 89.54 to 114.78 is 99.18, thereby making the July 2023 of 99.58 a crucial low. The subsequent sharp rally ended in October 2023 at 107.35 and the Dollar Index fell to 100.62 in December 2023. Thus, the Dollar Index is finding strong support in the 100 – 101 zone. The next rally in the Dollar Index faltered in February 2024 nearabout the key level of 104.81 (made a high of 104.98). Await a decisive move beyond 104.98 or a fall below the March 2024 low of 102.36.

The Indian 10-year benchmark yield (7.18% GS 2033) is below the critical 20 week Wilders moving average (currently at 7.17%) for several weeks. In the last two weeks, benchmark yield has risen and is, currently, placed at the immediate demand level of 7.09%. If yields stay below 7.09%, in the coming weeks, a test of the May 2023 low of 6.94% is likely. Else, yields may rise to next test the 7.11% - 7.12% demand zone with 7.17% remaining the crucial level.
